Bank App: user flow

The path from first visit to using your money, profile picture included. If you get lost, click **Accounts** in the header.

public page | sign-in step | logged-in page | action you can try | not built yet

Lost? Do this

Click **Accounts** in the header. It opens `/user/overview`, which redirects to the EUR tab.
If you are logged out, it sends you to the login page first and brings you back afterwards.

Where each link goes

Routes, who can open them, and what to expect. Based on `app.routes.ts`, `user.routes.ts` and the header and account components.

Page	Who can open it	What happens
`/` and `/home`	Everyone	Landing page.
`/register`, `/login`	Logged-out visitors	If you're already logged in, you are redirected to `/user/overview`.
`/user/...`	Logged-in users	Logged out? You go to `/login?returnUrl=...` and return after signing in.
`/user/overview/:currency`	Logged-in users	Accepts eur, dkk, sek, pln. Anything else redirects to `/user/overview/eur`.
`/user/settings`	Logged-in users	Placeholder page that only says "settings works!".
Header: Accounts	Everyone	Links to `/user/overview` (logged-out users are sent to login first).
Header: Cards, Loans & Mortgages, Investments, Security & Support	Everyone	No page yet. Their link is empty, so clicking goes to the home page.
Left menu: Subscriptions, Transaction history	Logged-in users	No routes exist for them. An unknown address falls through to the catch-all and redirects to the home page.
Any unknown address	Everyone	Redirects to the home page.

Try-it checklist

#	Step	What you should see
1	Register with a new email	You land on the EUR overview with a balance of 0.
2	Deposit into EUR, then add DKK with the + tab	EUR balance rises; a DKK tab appears with 0.
3	Convert some EUR to DKK	EUR goes down, DKK goes up by the live rate.
4	Upload a profile picture	Avatar changes on the left. A file over 2 MB shows an error.
5	Log out, then log in again	Balances and picture are still there.
